Analyze project status and identify process risks and gaps

#### Practice Improvement

Adopt and adapt practices to address process risks and gaps

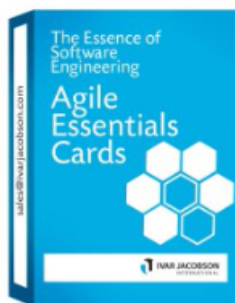

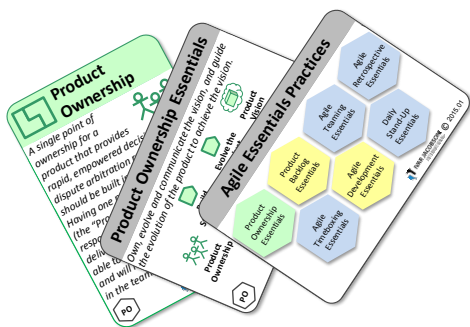

### What You Get

#### Agile Essentials Card Deck

A unique reference and tool for agile adoption.

#### Supplementary Material

Access to electronic materials including slideware and supporting practice resources.

## Agile Essentials Health-Check

*Surface hidden gaps and opportunities to optimize performance.*

When facing complex challenges, even the best agile teams can struggle to cover all the bases and ensure something doesn't fall through the cracks. Retrospectives help the team reflect on known experience and address identified challenges, but can easily help identify missed gaps, deficiencies, dependencies, risks and opportunities that are not immediately visible to the team.

**Approach:** Packaged Service offering (2-5-Days, depending on team size, experience and challenge complexity).

### Description

This health-check packaged service holds a mirror up to the team, to help them assess their levels of agility, identify any gaps in their agile practice armory, and enable them to fill these gaps to optimize their performance and maximize their success:

- Is the whole stakeholder network fully appraised and engaged?
- Is the product ownership function robust and well-supported?
- Are all opportunities for fast-feedback being exploited?
- Is the team mission and way of working visible enough?
- Is progress and governance reporting joined-up and rationalized?
- Are technical development tools and techniques optimized?
- Are product demonstrations frequent and effective enough?
- Is continuous acceptance optimized and the road-to-live clear?

It leverages the unique power of the Agile Essentials cards, which put the essentials for success literally into the hands of practitioners and teams. The Agile Essentials cards:

- Put professional practices into the hands of practitioners
- Empower the team to select the right practices for them
- Ensure a cohesive and aligned approach
- Increase visibility, transparency and governance
- Ensure coverage of all key process risks and concerns
- Enable controlled and continuous process improvement
- Support smooth scaling to achieve ever greater benefits.

### You will:

- Assess current levels of agility
- Identify process gaps
- Analyze process risks
- Adopt practices to address risks and gaps
